***Allowable Subject Matter***

1. Claims 1-10 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The present invention relates to method and apparatus for generating a transmission signal in the transmitter utilizing spreading. Particular, prior art of record, taking individually or collectively, fails to fairly teach such method and apparatus, as a whole, including "distributing the spread data into two sequences of data at a specified timing synchronized with the reference clock; generating a first pulse shaping signal at a specified timing synchronized with the reference clock; generating a second pulse shaping signal at a specified timing synchronized with the reference clock; generating a cosine carrier and a sine carrier; multiplying one of the two sequences of data, the first pulse shaping signal, and the cosine carrier together; multiplying the other of the two sequences of data, the second pulse shaping signal, and the sine carrier together" in independent claims 1 and 6 (claims 1-5, 7-10 depend therefrom). Thus, claims 1-10 are found to be novel and unobvious over prior art of record.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
